ATS Travel Grant Interviews

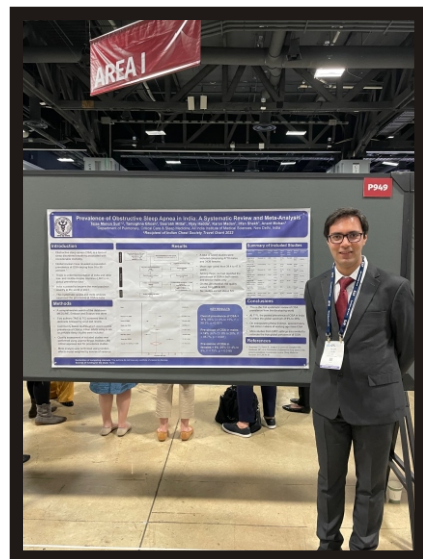

Dr. Tejas Suri

Q1. Please tell ICS Members about your background and how did you come to know about the ATS travel grant?

- I have done my medical training, MD Medicine, and DM in Pulmonary, Critical Care & Sleep Medicine at AIIMS, New Delhi. I worked as an Assistant Professor in the Department of Pulmonary, Critical Care & Sleep Medicine at AIIMS, New Delhi from January 2022 to December 2022. Currently, I am working as a consultant at the Sitaram Bhartia Institute of Science & Research, New Delhi.

I was aware about the ATS travel grant through my colleague at AIIMS, New Delhi, who had previously received it. After submitting my abstract at ATS, I came to know about the application window for this grant through the email sent by the Indian Chest Society to its members.

Q2. How did the ATS travel grant help you?

- As I was a contractual faculty at the time of submitting the abstract, I did not have any travel support for conferences available to me. Hence, this grant was very valuable in making my journey to the USA a reality to attend the ATS 2023.

Q3. How was the experience and what would you say to other young members of ICS?

- The experience of applying for the grant and receiving the support was seamless without any undue hassles. The email from ICS clearly explained the procedure for applying and the documents needed. The office staff of ICS was highly supportive throughout the entire process. I would highly recommend young Pulmonologists who are attending ERS, ATS or Chest conferences to apply for the generous travel grants of the ICS.

Q4. How was the experience at the ATS and what did you present?

- It was a professionally enriching experience to be able to attend the American Thoracic Society Conference at Washington DC. This was the first time I had visited USA for a medical conference, and I was pleasantly surprised at the magnitude of the conference. I was able to meet many Pulmonologists working in the USA and in other countries, and it broadened my

perspective. During the conference, I presented my work on a systematic review and meta-analysis of the prevalence of obstructive sleep apnea in India. We found that over 100 million Indians of working age are suffering from OSA, which makes it a major neglected public health problem.

Q5. How do you feel as a receipt on the grant and on being an ICS Member?

- I am honoured to have been selected for this prestigious and highly competitive grant which is awarded very selectively by a panel of highly eminent pulmonologists who scrutinize each abstract for its scientific content and rigour.

Q6. Did you visit the ICS Stall and what was your experience there?

- It made me proud to see the ICS stall amongst the selective few stalls of respiratory societies from around the world. The presence of many of the senior Indian pulmonologists made me feel at home despite the massive scale of the conference.

Q7. How did it feel to represent India and ICS at an international conference?

- It is always a huge privilege to represent India at any international forum or conference. The fact that I was representing the Indian Chest Society as a travel grant awardee made it a very memorable experience for me.
-

Dr. Saurabh Singh

Q1. Please tell ICS Members about your background and how did you come to know about the ATS travel grant?

- I have been a member since long in ICS and ICS regularly send E-mails for various career opportunities for its members. As I became aware of this grant by email updates, I thought of taking up the opportunity and I was successful.

Q2. How did the ATS travel grant help you?

- It helped me plan my journey and was a big relief for my expenditure management. I did not feel burdened financially.

Q3. How was the experience and what would you say to other young members of ICS?

- It feels so honoured to be awarded by the national society and gives a feeling of being outstanding in our specialty which is recognised by national and on international platform.

I can only say to young members that, take time out from busy work and take advantage of these opportunities, these small things make you big !!

Q4. How was the experience at the ATS and what did you present?

- It was a wonderful feeling that I presented my case report with the logo of India. I had visitors coming to my stall and discussing the case and endorsing my work and welcoming me to United States to present my wonderful case which is of great value and outstanding clinical material.

My presentation was a case report on fulminant version of systemic sarcoidosis.

Q5. How do you feel as a receipt on the grant and on being an ICS Member?

- Honours and awards are always very special for anyone irrespective of their monetary value. It always feels honoured upon receiving an award from national body.

Q6. Did you visit the ICS Stall and what was your experience there?

- Yes, I did visit the ICS stall at ATS, it was a pleasure to meet our own people outside country and moreover meeting ICS members who supported me in my career growth.

The stall was well managed with sweet and salty savouries from India.

Q7. How did it feel to represent India and ICS at an international conference?

- I think it was one of the moments in my life that I will cherish lifelong. I would keep on trying to work in my future where I am cherished by ICS for being a member and India as a country for being its proud citizen.

JOB-RELATED ASTHMA TRIGGERS

QUESTION

What are the common Job-related asthma triggers in the workplace?

ANSWER

Occupational asthma is a type of asthma. It occurs due to an allergic immunological response to the chemical fumes, gases, dust, or other substances on the job. It is possible to develop occupational asthma in almost any workplace. But your risk is higher if you work in certain occupations. Some of the riskiest jobs include adhesive handlers, animal handlers, bakers, millers, farmers, metal workers, forest workers, carpenters, painters, hairdressers, health care workers, poultry workers, sea food processors, textile workers, pharmaceutical industry workers, etc. More than 400 workplace substances have been identified as possible causes of occupational asthma.

cont in next slide...

ANSWER

Animal substances, such as proteins found in dander, hair, scales, fur, saliva and body wastes.
Chemicals used to make paints, varnishes, adhesives, laminates, and soldering resin. Other examples include chemicals used to make insulation, packaging materials, and foam mattresses and upholstery.
Enzymes used in detergents and flour conditioners.
Metals, particularly platinum, chromium, and nickel sulphate.
Plant substances, including proteins found in natural rubber latex, flour, cereals, cotton, flax, hemp, rye, wheat, and papain – a digestive enzyme derived from papaya.
Respiratory irritants, such as chlorine gas, sulphur dioxide and smoke.

RESPIRE QUIZ

(May - August 2023)

A 28 years male, having a diagnosis of HIV related PJP pneumonia presented with acute onset of breathlessness of 24 hours duration. He was found to have right pneumothorax with large bronchopleural fistula. He is a smoker, weight lifter by occupation and it was first episode of pneumothorax. There was persistent airleak after seven days of tube thoracostomy. Next step for his management in a tertiary care institute would be -

1. Thoracotomy with stappling of blebs and pleural abrasion.
2. VATS with Talc insufflation
3. Put a Heimlich valve and send home, to review after seven days
4. Pleural sclerosis

Please send correct answers to Dr. Neeraj Gupta
at E-mail : drneerajajmer@yahoo.com and cc to icsofficeexecutive@gmail.com
First three correct winners stand a chance to feature in the next issue of Respire Quiz Section

Correct response for RESPIRE (January - April 2023)

All are true in context to MUCORMYCOSIS except -

1. Mortality rates are as high as 96% with disseminated disease.
2. Hematologic malignancies are most common predisposing factors.
3. Most common presentation is sinus involvement.
4. Breakthrough Mucormycosis in patients receiving Voriconazole therapy is frequently reported.

Correct Answer : 2. Diabetes is the most common predisposing factor for Mucormycosis, and not the hematologic malignancies.

Congratulations to RESPIRE Quiz Winners for the issue (January - April 2023)
